VanEck Vectors™ Emerging Markets High Yield Bond UCITS ETF (the "Fund")

a sub-fund of VanEck Vectors™ UCITS ETFs plc (the "Company")

ISIN: IE00BF541080

This Fund is managed by VanEck Investments Ltd, a subsidiary of Van Eck Associates Corporation.

Objectives and Investment Policy

The Fund's investment objective is to replicate, before fees and expenses, the price and yield performance of the ICE BofAML Diversified High Yield US Emerging Markets Corporate Plus Index (the "Index").

In order to seek to achieve its investment objective, the investment policy of the Fund is to invest in a diversified portfolio of US dollar denominated below investment grade emerging markets corporate and quasi-government debt instruments publicly issued and listed on major US and Eurobond markets that consist of the component securities that comprise the Index.

The Index is comprised of fixed rate US dollar investment grade emerging markets corporate and quasi-government debt instruments with greater than 12 months to maturity. In order to qualify for inclusion an issuer must have risk exposure to countries other than members of the FX G10, and territories of the US and Western European countries.

The FX-G10 includes all Euro members, the US, Japan, the UK, Canada, Australia, New Zealand, Switzerland, Norway and Sweden. Due to the practical difficulties and expense of purchasing all of the securities in the Index, the Fund does not purchase all of the securities in the Index. Instead, the Investment Manager utilizes a "sampling" methodology in seeking to achieve the Fund's objective. The Fund may purchase a subset of the debt instruments (for example bonds) in the Index in an effort to hold a portfolio of debt instruments with generally the same risk and return characteristics of the Index.

The Fund may invest in ancillary liquid assets and money market instruments which may include bank deposits, certificates of deposit, fixed or floating rate instruments, commercial paper, floating rate notes and freely transferable promissory notes.

Further, the Fund may also invest in financial derivative instruments for efficient portfolio management or hedging purposes. The Fund may use futures, swaps

and forwards which may for the avoidance of doubt include currency futures, currency swaps and currency forwards for the purpose of reducing risk within the Fund.

The Fund may be leveraged through the use of financial derivative instruments; any such leverage would not be expected to be in excess of 100% of the Fund's Net Asset Value. The Fund may not invest more than 10% of its Net Asset Value in open-ended collective investment schemes. The Fund may borrow money in an amount up to 10% of the market value of its net assets at any time for the account of any Fund and the Depository may charge the assets of the Fund as security for any such borrowing, provided that such borrowing is only for temporary purposes. The Fund may invest more than 30% of its Net Asset Value in securities which are below investment grade.

The Fund invests in the underlying (physical) securities that make up the Index and does not take part in securities lending.

The Fund, using a "passive" or indexing investment approach, attempts to approximate the investment performance of the Index by investing in a portfolio of securities that generally replicates the Index. The Investment Manager will regularly monitor the Fund's tracking accuracy.

Recommendation: This Fund may not be appropriate for investors who plan to withdraw their money within 5 years.

- Fund's base currency: U.S. Dollar
- Distribution policy: Income accumulated

Risk and Reward Profile

The risk and reward indicator is calculated using historical and simulated historical data. Historical data may not be a reliable indication for the future. Therefore, the risk classification may change over time.

Even if the Fund is in the lowest risk category, it does not mean it is risk free or that capital is guaranteed or protected.

The fund belongs to category 3 based on the type of investments, which imply the risks reported below.

Investments in emerging market countries are subject to specific risks and securities are generally less liquid and less efficient and securities markets may be less well regulated.

The following risks can be materially relevant but are not necessarily adequately captured by the synthetic risk indicator and may cause additional loss:

- **High Yield Securities Risk:** The prices of junk bonds are likely to be more sensitive to adverse economic changes or individual issuer developments than higher rated securities. During an economic downturn or substantial period of rising interest rates, junk bond issuers may experience financial stress that would adversely affect their ability to service their principal and interest payment obligations. The secondary market for securities that are junk bonds may be less liquid than the markets for higher quality securities.
- **Interest Rate Risk:** When the general level of interest rates goes up, the prices of most bonds go down. When the general level of interest rates goes down, the prices of most bonds go up. The historically low interest rate environment increases the risk associated with rising interest rates including the potential for periods of volatility.
- **Emerging Markets Risk:** Additionally, to the above mentioned risks, Emerging Markets are subject to further special risks, among which are currency fluctuations and exchange control; imposition of restrictions on the repatriation of funds or other assets; governmental interference; higher inflation; social, economic and political uncertainties.

For more information on risks, please see the "Risk Factors" section of the Fund's prospectus, available on www.vaneck.com.
