Objectives

The investment policy of the Fund is to seek to track the performance of the Solactive Gold & Silver Miners US Listings Carbon Tilted Index (Net Total Return) (or any other index determined by the Directors from time to time to track substantially the same market as the Solactive Gold & Silver Miners US Listings Carbon Tilted Index (Net Total Return) and which is considered by the Directors to be an appropriate index for the Fund to track), in accordance with the Prospectus (the "Index") as closely as possible, while seeking to minimise as far as possible the difference in performance between the Fund and the Index. The Fund seeks to achieve the objective by tracking the Index and, with regard to ESG criteria, giving exposure to global companies with lower carbon intensity and excluding the ones with negative social, governmental and environmental impact.

The return of the fund depends mainly on the performance of the tracked index.

Fund income is not paid out, but instead will be reinvested.

Higher risk

The risk indicator assumes you keep the product for 5 year(s).

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this product as 4 out of 7 which is a medium risk class.

This rates the potential losses from future performance at a medium level. The past may be a poor predictor of the future and, hence, the actual risk of losing money may vary significantly.

The product may be exposed to further risk factors such as operational, political and legal risks which are not included in the summary indicator. Please refer to the prospectus for more detail.

This product does not include any protection from future market performance so you could lose some or all of your investment.

If we are not able to pay you what is owed, you could lose your entire investment.
